Mowa pod wpływem stresu

Speech under stress

Słowa kluczowe: stresory; bazy danych; czynniki akustyczne

Key words: stressors; speech databases; acoustic features

Summary

The aim of this work is to characterize speech under stress. The paper is organized as follows: Section two contains information about definition of stress associated with speech. Section three illustrates the description of stressors. Section four presents the model of speech under stress. Section five gives information about acoustic determinants of stress. Section six describes differences between experiments carried out in the real and the stress-related conditions. Section seven contains a list of databases used in analyzing speech under stress. The last section provides information about possibilities of using the results of speech under stress analysis.
